

Caregiver Strategies for

# Managing Incontinency & UTI's

Most individuals with memory loss diseases will eventually have difficulty independently navigating the many steps involved in toileting. Challenges with personal hygiene may increase the risk of urinary tract infections which can lead to more than just physical symptoms. Caregiver assistance is vital, but sometimes we don't know when and how to help. Join Dr. Angelica Catusco for this interactive session on how to best assist your family member in a way that preserves their dignity and your peace of mind. Sign in on your computer or phone.
